

## **Opening a New Era of Importing Radiate Pines from NZ&AU**

With a great demand for timber to satisfy the national need, China imports a large number of plantation forest resources, which pushes the radiate pines widely recognized and accepted by the current Chinese market to the high-grade green fields in manufacturing. The application of radiate pines in China has been beyond a popularizing stage, and they have been widely used in the fields of construction, high speed rail, wood-based panels, furniture, floor and packaging. The year of 2009 opens a new trade and manufacture era of China importing radiate pines, reaching a peak of importing radiate pine logs and sawntimbers from New Zealand and Australia in history. The great era of exchange, trade investment and cooperation in timber and wood products will be expected in 2015 and the coming years by wood industries of China, Australia, New Zealand, and other parts of the world.

AITA & Associates, with years of experience and strong network in Chinese timber industry, aims to provide a bridge between China and the world. If you are seeking a Chinese partner for business cooperation in this industry, we will help raise your profile in China and provide all the other assistance needed to ensure you a fruitful partnership. **For enquiries, please contact us on +86 10 67162030/31/32 or email: [aita@aita.com.cn](mailto:aita@aita.com.cn) .**
